Living Walls &

Versatile Stacking Modular Tree and Shrub Protection

Eco-Haven™ *Original* is supplied as flat sheets that are easily formed into tubes using integrated securing tabs.

Supplied in two widths, to form 10cm diameter tree guards and 15cm shrub shelters, and two heights, 60 and 90cm.

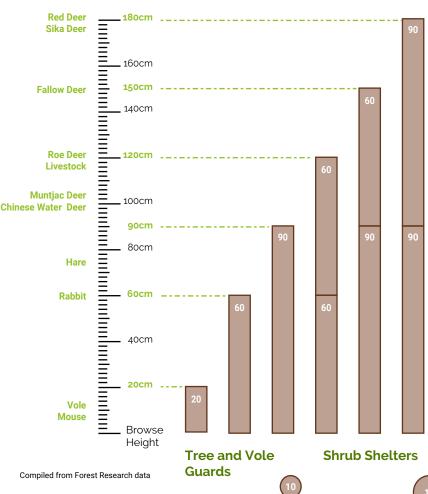

The innovative, interlocking, modular construction provides the freedom to also create 120, 150 and 180cm high tubes, from just these two tube heights, without the risk of displacement and breaches.

Vole Guard

A smaller 20cm x 10cm diameter version is also available to form vole guards.

Eco-Haven™ *Original* Module **Protection Height** Recommended **Height Combinations**

Living Walls &

Eco-Haven™ *Original* Tree and Shrub Tube Assembly

- 2. Bring the sides of the tree guard together to form a tube and overlap so the side with the triangular tabs lays under the side with the slots.
- 3. Push the tabs through the adjacent slots, pull them fully through so the notches lock them in place to form the finished tube.

Eco-Haven™ Original Tree and Shrub Tube Stacked Tube Assembly

The stacking design allows you to create 60, 90, 120, 150 and 180cm high tubes from just 2 tube heights.

- 1. For guards taller than 90cm attach a combination of 60 and/or 90cm tree guards together.
- 2. Start by placing the sheets matt side facing up and slightly overlap the upper sheet over the lower one.
- 3. Push the 2 triangular tabs on the top toothed edge of the lower sheet up through the bottom slots of the upper sheet.
- 4. Assemble the pair of tree guards as per tube assembly guidelines above.

Eco-Haven™ Original Tree and Shrub Tube Post Attachment

- 1. Once the tree guard is assembled, detach the cable ties from the edge of the tube (1 pair for the 60cm and 2 pairs for the gocm tubes)
- 2. Thread the cable ties through the top and bottom tab slots for the 60cm tube and all three tabs for the 90cm tubes
- **3.** Secure the tie around the support post by sliding the pointed end through the slotted end of the cable tie and tighten.

Eco-Haven™ Original Tree and Shrub Tube Ventilation Adjustment

1. As an option, to allow more light and air to reach the sapling, bend the middle row of cut triangles outwards.

alls & Accessori

Eco-Haven™ Original Vole Guard Assembly

- **1**. Begin with the shiny side facing up
- **2**. Curve material round to form a tube, so the matte surface is on the outside
- **3.** Push the tab through its corresponding slot from the inside
- **4.** Pull through and slot in place so that it is secured
- 5. Repeat step 3 and 4 on second tab
- **6.** Both tabs should be fixed in place and visible from the outside of the tube
- **7**. Assembled Vole Guard, base features talons to aid firming into ground

NEW

Eco-Haven™ Original Coppice Guard

Until now protecting coppiced trees from grazing animals has been challenging and expensive as existing tree guards do not accommodate the larger diameter tree stools and using wire fences is expensive. Eco-Haven™ *Original* coppice guard has therefore been designed with interlocking sections to form guards in multiples of 1.80m girth.
